

# ELECTROHYDROSTATIC PUMP UNIT WITH INTERNAL GEAR PUMP (EPU-G)

Extension of the EPU Family for Smaller Displacement Volumes

The EPU-G, featuring a 4-quadrant internal gear pump and a high dynamic servomotor, targets applications with flow rates below 80 l/min and pressure levels up to 345 bar where high dynamic response and power-density are key.

Engineered for direct control via pump speed, the EPU-G is suitable for self-contained hydrostatic transmissions and can build maximum pressure at both pump ports. It is available in sizes 13 and 20 cm<sup>3</sup>. Sizes 5 and 8 cm<sup>3</sup> will follow. This is adding smaller pump volumes to the existing EPU product range, which spans from 19 to 250 cm<sup>3</sup>.

The EPU-G's variable speed and power-on-demand operation reduce noise emissions at partial load, significantly lowering energy consumption and operating costs. With high dynamics, low inertia and minimal pulsation, the EPU-G enhances overall machine performance. Its compact axial mounting interface allows direct manifold connection without additional piping, resulting in increased system stiffness, reducing actuator footprint, simplifying machine design, and reducing setup and maintenance time.

Addressing customer needs for ease of use, modularity, electrification, energy efficiency, robustness, serviceability and sustainability, the EPU-G's compact design and reduced complexity make it easy to handle and integrate without requiring extensive hydraulic expertise. Moog provides an end-to-end product offering and supports customers in the transition from conventional hydraulic or electromechanical to electrohydrostatic actuation from system design to implementation.

## ADVANTAGES

- No min. speed: Allows 0 rpm, easy close-looped control for a limited period of time
- High dynamics: Increases machine performance, position/ pressure/ force control
- 4-quadrant operation: eliminates the need for a control valve; helps realize close-looped control
- Predefined range and combinations: Simplifies maintenance and spare parts storage
- Manifold interface enables direct mounting, less piping, compact actuator design
- High Efficiency: Ensures thermal stability, reduced losses

## APPLICATIONS

- Applications with distinctive rapid and force movement / maximum utilization of drive power i.e. medium and large size presses
- Steam, water and gas turbines
- Solar panel adjustment
- Process flaps and valves
- Commercial and municipal vehicles
- Construction and mobile machinery
- Active motion/bogie control (e.g. tilt trains)
- Chipboard and paper presses
- Food industry

## TECHNICAL DATA

## DIMENSIONS <sup>3)</sup>

| Size               | A [mm (in)]              | B [mm (in)] | C [mm (in)]                |
|--------------------|--------------------------|-------------|----------------------------|
| 13 cm <sup>3</sup> | 152 (5.98) to 207 (8.15) | 15 (0.591)  | 549 (21.60) to 716 (28.21) |
| 20 cm <sup>3</sup> | 152 (5.98) to 218 (8.58) | 15 (0.591)  | 524 (20.64) to 843 (33.19) |

<sup>3)</sup> Dimensions depending on size and servo motor type. For detailed information see catalog.

## Mounting Pattern

## Pump Front View

① Place holes inside marked circle

| Port | d           |
|------|-------------|
| A+B  | 15 to 26 mm |
| F    | 10 mm       |
| L    | 19 mm       |
